EDUCATION

University of Michigan **Ann Arbor, MI**
Bachelor of Science in Computer Science Apr 2028
Coursework: Data Structures & Algorithms, Statistics and Data Analysis, Discrete Mathematics

EXPERIENCE

Michigan Data Science Team – Alpha Trading **Ann Arbor, MI**
Software Developer Sep 2025 – Present

- Developed quantitative trading strategies by applying machine learning and statistical modeling techniques to financial market data.
- Collaborated with team members to backtest and refine alpha-generating signals using Python, Pandas, and scikit-learn.

NBA Performance Predictor – Wolverine Sports Analytics **Ann Arbor, MI**
Project Team Lead Sep 2025 – Present

- Developed and trained predictive models using Python (scikit-learn, Pandas, NumPy) to forecast NBA player performance metrics based on salary disparities and matchup data.
- Engineered a web scraping pipeline using BeautifulSoup and Requests to collect, clean, and structure player statistics and salary data from multiple sources, storing results in a structured SQL database for querying and analysis.

Machine Learning Text Classifier **Ann Arbor, MI**
Independent Project Oct 2025 – Nov 2025

- Engineered a multi-class Naive Bayes classifier from scratch in C++ to automatically categorize thousands of university Piazza forum posts by topic.
- Implemented an efficient data ingestion pipeline for large CSV datasets using the csvstream.hpp library and managed feature counts using core STL containers.
- Developed the core probabilistic model, using log-probabilities to compute priors and likelihoods, which prevents floating-point underflow on large vocabularies.

iOS Productivity App **Remote**
Independent Project Sep 2025 – Jan 2026

- Built a full-stack iOS application in Swift and SwiftUI that enforces study sessions by integrating Apple's Screen Time API (FamilyControls, ManagedSettings) to lock distracting apps until users answer correctly.
- Integrated the Claude API (Anthropic) via URLSession to dynamically generate subject-specific study questions, implementing JSON response parsing and answer validation logic entirely in Swift.

ACTIVITIES

AI Business Group **Ann Arbor, MI**
Member Sep 2025 – Present

Adventureland Amusement Park **Farmingdale, NY**
Ride Operator Jun 2024 – Aug 2025

- Ensured the safety and positive experience of hundreds of guests daily by adhering to strict operational protocols and providing clear, friendly communication.

TECHNICAL SKILLS

Languages: C++, Python, Java, JavaScript, HTML/CSS, SQL
Tools: Git, VS Code, Jupyter Notebook, Linux
Technologies: Pandas, NumPy, scikit-learn, BeautifulSoup, Flask, Chart.js
